

M&S Armaturen GmbH

PARTNER NOT JUST SUPPLIER.

## More success with M&S products:

### The new ASI control unit

ASI stands for Actor-Sensor-Interface, ASI is a standardised cabling system for communication between sensors (e.g. proximity switches) and actors (e.g. valves).

Sensors and actors are therefore only connected through one cable – power supply included. Growing cable loops and huge switch cabinets can be banned with the M&S control unit.

Further advantages of the new control unit are an easy assembly, low installation costs, frequent use of this product solution and mainly, data and power is transferred on a two-core connection. The complex parallel wiring disappears completely.

The M&S ASI control unit is available for all M&S stainless steel actuators PAMS, the standard version includes two proximity switches and one solenoid.

Other versions are available on demand.

We are pleased to assist you with any query – you are more than welcome to contact us!
