

M&S Armaturen GmbH

PARTNER NOT JUST SUPPLIER.

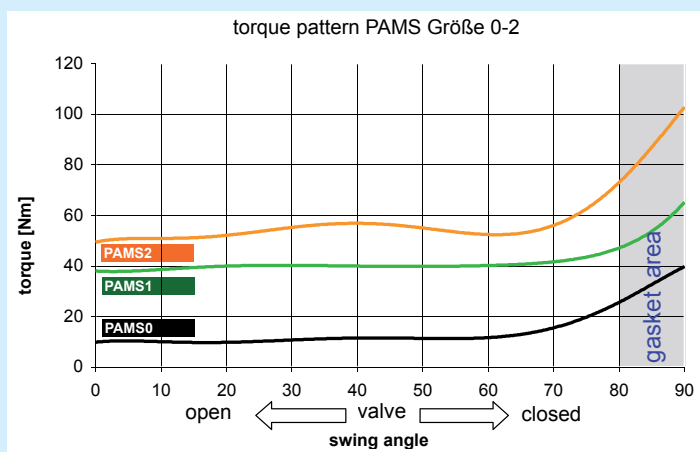

More success with M&S products:

New actuators PAMS size 0, 1 and 2

Our pneumatic actuator M&S size 0 "PAMS 0" had successful start of production. As a result of enhancements and consequent improvement we present the PAMS 2 actuator. This product is more compact than its forerunner. Due to the enormous raise of torque our "mega-actuator" PAMS size 3 is dispensable now. We optimised our major actuator PAMS 1 with experiences of developments of actuators sizes 0 and 2. PAMS 1 is characterised by a compact construction and a raised torque as well – achieved by optimised construction type of rotor. Thereby cylinder capacity reduced and in series air consumption decreases per cycle of upstroke for 50 % by comparison to the forerunner. Thus energy will

be saved in automatic production process. Unnecessary air consumption by oversizing can therefore be avoided. All three actuators are smaller than forerunner models. They need fewer air but for all that they have a higher torque.
